

What is claimed is:

1. An improved type rule housing structure, comprises a housing, provided at its front end with an exit for said type rule; and with a braking block near its top end, and is characterized in that it comprises further:
 - 5 2. a slip-resistant pad, provided over the periphery of said housing and extending from the upper edge of the front side of said housing toward the upper side and edges of left and right sides and further around the rear side to enclose the type rule at the middle of the lower side such that the upper and rear sides can be enclosed completely, while only the rear end of the lower side of said housing is enclosed; and wherein said slip-resistant pad is
10 protruded over each side of said housing to achieve a damping effect.
 3. An improved type rule housing structure as recited in claim 1, wherein several recessed portions are further provided regularly at the lower side of said housing such that a slip-resistant protruding portion is formed
15 correspondingly to facilitate gripping thereon.
 4. An improved type rule housing structure as recited in claim 1, wherein a locating block is further provided by extending from the junction of said lower side and the rear side of said housing in a manner that said locating block can be gripped by the finger of a user.
 - 20 5. An improved type rule housing structure as recited in claim 1, wherein said slip-resistant pad together with said housing can be provided with different colors to enhance the aesthetic feeling of the entire housing.
 6. An improved type rule housing structure as recited in claim 1, wherein said slip-resistant pad is made of a rubber material.
 - 25 7. An improved type rule housing structure as recited in claim 1, wherein said

slip-resistant pad is formed integrally with said housing through injection molding.
